**Solution to Exercise 4: Create a composite identifier**

**Key Point(s):**
- If one variable is insufficient to create a unique identifier, one can construct a composite identifier from more than one variable.
- Each of the contributing fields, but not the composite resulting variable is set to be Key.
- EpiData provides automatically calculated time fields that can be used to capture data entry time.

**Tasks:**
- Add two fields for **Starting time** and **Ending time** for data entry in the section **Calculated fields**.
- Test the data entry form in **EpiData EntryClient**

**Solution:**
A complete record may look as follows:
